“NO-LOAN” New Car Plan

Here is a serious cash saving tip that will allow you to drive a different car every three to four years and make NO LOAN PAYMENTS ever to a bank!!

You need to start off with a car that you can buy for cash. Buy a reliable used car that has a proven track record of safety, reliability and low up-keep. Then for the next three to four years make a typical "car payment" to your savings account!!

If you can afford \$400 per month (as an example) then pay that amount to YOU, rather than to a bank each and every month! After four years you will have \$19,200 plus the interest from what you have earned from your CD or savings account! Then you sell your present car and add that amount to the \$19,200/plus you have in your savings account and go buy a good used car. Now you are driving a nice car totally debt free and under warranty! Then you start the entire process all over again and you are always driving a late model car debt free with no interest paid to a bank.

It takes discipline but you can be debt free and live the G-d Given, lower stressed life He has called you to live.
